GRAPEVINE — WINE RACK PRODUCT INFO

Grapevine Product Info Manual

How to find, filter, check and update products in the shared Grapevine app — the Wine Rack product list — and how to use the Wine Knowledge reference, Wine Trivia and Guess the Wine built into it.

Store 358 • Shared product list • November 2026 edition

App version 2026.11.04.14

This manual matches app version **2026.11.04.14**. Check the version code at the bottom of the Settings tab in the app (Section 11) — if it differs, the app has been updated since this edition.

Reading on a phone? Use the responsive web manual in the app's Documents tab — its text fits your screen, so you scroll instead of zooming. This PDF is the same manual, kept for printing.

This manual covers the app as it runs today: the product list (234 built-in products, with regular prices from the P8 and P9 price lists), stores and store types, searching and the barcode scanner, filters and sorting, product details, editing, adding products, signing in with Google, choosing your own display name, Loving wines and commenting on them, suggestions, the panel behind the Settings gear — its Settings, Documents, Support and Games & Contests tabs and the restricted Admin area — the food pairing finder, Wine Knowledge, Wine Trivia and Guess the Wine, the Sale / Reg / Save price display, tag prices and register totals, and the dated sales — the P8 and P9 LTOs and the Black Friday Flash Sale — shared sync, and troubleshooting.

Appendix Quick reference card

How to use this manual. If you are new, read Sections 1 to 4 in order. If you already use the app, jump straight to the task you need — each section stands on its own. Section 12 explains what Wine Knowledge is and how to use it in the app — the reference itself lives in the app, not in this manual. **New in this edition:** a second game, **Guess the Wine** — read the tasting notes and pick the right bottle (Section 11); and the signed-in users list in Admin now opens in its own window, so the Admin page stays short (Section 11). Everything else matches the previous edition.

1 Getting started

Grapevine is a shared, phone-friendly product list for Wine Rack stores. It is the app formerly called WR Product Info: the name, page title and home-screen label are now **Grapevine**, while the web address and the shared list are unchanged. Open the app link in your phone browser. The list loads from the shared catalogue — **234 built-in products** — so what you see is the same product information other users see.

The first-visit popup: “Which store are you at?”

On a first visit the app asks **“Which store are you at?”** Pick your store from the dropdown to see that store’s products. If your store is not in the list yet, choose **Add store** in the dropdown, enter the new store number, pick its **Store type** (Section 2), and continue.

> **New store?** Once it is created, use the Settings gear (top right) → **Store settings** (bottom of the Settings tab; tap to expand) → **Set store products** to tick the products it carries. A new store starts with no products ticked, so its list will be empty until you do this. Its **cooler values also start blank** — cooler status is per store (Section 2), so nothing is shown as In Cooler or Not In Cooler until you set it for that store.

The popup may reappear on a fresh open. If it does, simply pick your store again — no product data is lost by re-picking.

Browsing is open — sign in to change or Love

You do **not** need to sign in to use the list. Anyone can open the app and browse, search, filter, sort and scan — no account is needed to look something up.

Sign-in is only for making changes and Loving wines. **You cannot edit or make changes of any kind unless you are signed in** — that covers Edit product, Add product, Mark unavailable, Not in plano, the Cooler and On sale toggles, linking a barcode, Loving a wine, posting a wine comment, leaving a suggestion, and the Admin appointments and bans. If you tap one of those while signed out, a **sign-in prompt** appears and the action does not go ahead until you sign in.

Signing in is with Google, from the **Account** block at the top of the **Settings tab** (Section 11). Once you have signed in on a phone, you stay signed in on that phone across visits — you do not need to sign in again each time. Every change and Love is saved under your account, so who changed what is on record (change history is kept in the Admin area, Section 11). You can also set your own **display name** in that Account block, so you appear under a name you choose instead of your Google account name (Section 11).

What loads first

- The heading **Grapevine**, in the Marcellus display serif, larger with wider letter-spacing and **flush left** — it is not centred — on the same line as the store selector.
- The **Food pairing finder** button, under the store pill (Section 11).
- Your store’s product list, with a count in the form “Showing X of Y products · Store 358”.
- The search and filter controls above the list.
- The **scan icon**, directly under the Settings gear (Section 3).

2 Choosing, switching and store types

Stores share one product catalogue. What differs by store is **which products that store carries**, **which products are marked unavailable there**, **each product's cooler status there**, and the store's **type** — which decides which impact documents that store sees.

1. Tap the compact, number-only **store pill** at the top of the screen, directly to the left of the Settings gear. It shows just the store number, for example **358**.
2. Choose another store number from the list.
3. The list reloads to show only the products that store carries.

To create a store, choose **Add store**, enter the store number, pick its **Store type**, and save — a type is required, and saving is blocked until one is picked. Then set its products in Settings → Store settings → Set store products (Section 11).

Store types

Every store has one type. The list starts with **Loblaws**, **Sobeys**, **Foodland** and **Non-boutique**. More types can be added with **Add new store type** in Store settings (Section 11) or from the type dropdown while adding a store; a new type is available straight away. Store 358 is a Loblaws store. Change a store's type later in Settings → Store settings.

Cooler status is per store

Whether a product sits in the cooler is **different from store to store**, so cooler status is held **per store** — it is not copied from another store. A **new store starts with every cooler value blank**: no product shows as In Cooler or Not In Cooler there until someone sets it for that store, from the product's three-dots menu or in the editor (Section 9), where the field is labelled for the store you are viewing. Setting or changing a cooler value in one store never changes it in another. For now cooler values are held per store **on each device**, until a shared cooler table exists, so a cooler change may not yet appear on another phone. **Store 358 keeps its existing cooler values**, exactly as recorded.

Store type decides the impact

Only **Loblaws** stores see the Legacy Loblaws impact. On the Documents tab that is the Full P8 and P9 Impact PDFs and the date-aware Current Impact Cheat Sheet (Section 11). What's on sample today? and Wine Knowledge sit in the Support tab, not Documents. For Sobeys, Foodland, Non-boutique and custom types — custom types behave like the non-Loblaws types for impact — the Documents tab instead shows a note that the impact for that store type is not loaded yet, until that type's impact document is added.

3 The top bar at a glance

- **Heading:** “Grapevine”, in the Marcellus display serif, larger with wider letter-spacing, **flush left** on the same line as the store selector.
- **Store pill:** compact, number-only, directly left of the gear — nothing sits under the store number.
- **Food pairing finder button:** directly under the store pill — the only place the finder lives (Section 11).
- **Settings gear:** top right. Opens Settings (Section 11).
- **Scan icon:** directly under the gear, fully transparent. Opens the barcode scanner (below).
- **Home-screen icon:** a single plum grape cluster — 6 flat circles in a 3-2-1 triangle, plum #7a4a78 on #ddd2f8. Chrome’s **Install app** now shows it too, from the manifest icon files (192, 512, maskable and Apple touch) now on the site; Firefox already showed it via the page favicon. If Chrome still shows a blank or old icon, remove the old shortcut and install again.

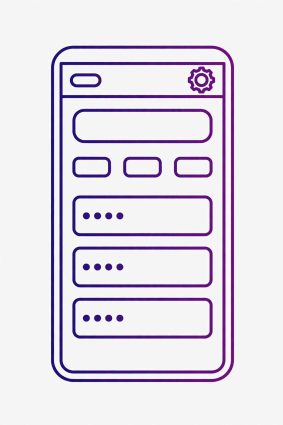

Figure 1 — Main list: Grapevine heading, store pill, gear, scan icon and food pairing button, then search, filters and rows. Schematic only.

Scanning a barcode

Tap the **scan icon** under the gear. A full-screen scanner opens, using the rear camera, with a viewfinder and a **back arrow (←)** that closes it — no Cancel button, no “point the camera” text. Point it at a bottle’s barcode:

- **Barcode recognised:** the list narrows to show **only that product**, opened **fully expanded** — exactly as if you had searched for it. The product’s brand, name and size appear in the Search box. **Clear the Search box** (or tap Reset filters) to bring the full list back.
- **Barcode belongs to a product your store does not carry:** a message says so, and no filter is left behind.
- **Any orientation:** the scanner reads barcodes at any angle — there is no rotate button.
- **Camera cannot read it:** use the typed-barcode fallback in the scanner and enter the number by hand. If a scan reads no digits at all, the scanner says so and points you to the typed fallback.

Barcode not on file. If the barcode is not linked to any product yet, a prompt headed “Barcode not on file” shows the scanned number. Pick the product from the picker and tap **Link barcode**, tap **Cancel** to leave it unlinked, or — if the product is not listed at all — choose **Add as a new product**. A linked barcode is saved on the shared list, so the same scan works on other phones. You can also link, change or clear a barcode without scanning, in the **Barcode section at the bottom** of the product editor (Section 9).

4 Browsing the product list

Each product is one entry (a card on a phone, a row on a wider screen). An entry shows:

Column	What it means
Product	Brand first, then product name. Badges can appear under the name (see below).
Size	Format, for example 750mL, 1.5L, 3L, 4L, 355mL or 1L.
Price	Price where recorded; a dash (—) means none recorded yet. On a **phone** the price sits directly under the heart and three-dots, **right-aligned**; on a wider screen it stays in its Price column. It is the **tag price**, marked "+tax & dep"; expanded details give the register total (Section 9). On sale, three lines show instead: **Sale**, **Reg** and **Save** (Section 9).
Sugar (RS)	Residual sugar in grams per litre, for example 5 g/L, where known.
Sweetness	For example Extra Dry, Dry, Off-Dry, Medium, Sweet or Extra Sweet, where known.
Richness	Style / Richness exactly as recorded, for example Light White, Medium Red or Rich Red.
Varietal	The grape or blend description, or N/A for non-wine products.
Tannins	None, Low, Medium, High, a range, or Unknown.
Acidity	For example Medium-High, or N/A for non-wine products.

Colour / type indicator

A coloured chip identifies the type at a glance. **White wine is blue. Rosé is pink.** Red wine and cider have their own chip colours in the same style. Use the chip for a quick type check; Richness gives the full wording.

Badges — one line under a product name

All badges sit on **one single line that does not wrap**, under the name. **"Loved by X merchants"** sits directly under that line, only when the count is above zero.

- **VQA** — gold badge: the product carries the VQA designation.
- **Not in plano** — the product is recorded but is not on the current planogram.
- **Cooler** — cooler product **at the store you are viewing** (per store).
- SALE — vivid pink badge: the product is on sale now.
- **Flash Sale** — black/yellow badge, gold ring around the row: $3 off, 16–30 Nov, on the Susse Reserve Riesling and JT Grand Reserve Shiraz (Section 13).
- **Vegan-friendly / Gluten-safe** — flagged products carry the matching badge.
- **Most loved** — deep rose-red badge with a star: highest Love count (Section 8).
- **Sale price not working** — amber warning badge beside SALE: the sale price is not going through at the till (Section 9).
- **UNAVAILABLE** — solid red banner under the name, red-tinted entry, price struck through: unavailable at the store you are viewing.

Sale entries are also tinted pink. Unavailable styling (red) is kept separate from sale styling (pink) on purpose.

5 Searching

Type in the **Search** box (placeholder: “brand, product, format, or varietal”). The list narrows as you type, matching brand, product name, format and varietal. Clear the box to see the full list again.

Accents do not matter. Typing **rose** finds **Rosé**, and **rosé** finds plain “Rose” text. Case is ignored too. The same matching is used in the barcode-link picker and the Set store products filter (Sections 3 and 11).

Search and filters combine: a product must match both. If you get no results, clear the search first, then widen the filters.

6 Filtering

Tap **Filters** to open the filter area; the button shows how many are on (for example “Filters · 2 on”):

Filter	Choices
Brand	All brands, or one brand from the pull-down **in the filter menu only**
Style / Richness	All styles, **All reds**, **All whites**, Cider, Extra Rich White, Light Red, Light White, Medium Red, Medium White, Medium-Full Bodied Red, Rich Red, Rich White, Rosé.
Sweetness	A multi-select dropdown: tap the Sweetness button, tap levels to toggle them on or off (selected levels go plum with a checkmark), staying open while you pick. Tap the button again or anywhere outside it to close it. Levels, in order: Extra Dry, Dry, Off-Dry, Medium, Extra Sweet, Sweet. Wines matching **any** selected level show; with nothing selected, the filter is off.
Tannins	Any tannins, None, Low, Medium, High only.
Max price	Enter a maximum price; only products at or under it show.
On sale	A toggle in the filter area. When on, only products on sale now show; the toggle turns pink.
Vegan-friendly	A toggle in the filter area. When on, only vegan-friendly products show; they carry a badge, with the source in the product’s Notes.
Gluten-safe	A toggle in the filter area. When on, only gluten-safe products show; they carry a Gluten-safe badge.
Loved	A toggle in the filter area. When on, only wines **you** have Loved show (Section 8); signed out, it asks you to sign in first.

Listed directly under All styles: **All reds** covers Light Red, Medium Red, Medium-Full Bodied Red and Rich Red (70 in the full list); **All whites** covers Light White, Medium White, Rich White and Extra Rich White (80). Rosé, Cider and products with no style set are in neither group; other styles are unchanged.

Tap **Reset filters** to clear all filters (including the Sweetness selection), the search and the toggles (On sale, Vegan-friendly, Gluten-safe, Loved) in one go. The button has a visible purple border.

Older filters are gone. “Priced only”, “In cooler only”, “Planogram only”, Download CSV and shelf information were all removed. Cooler and planogram status are badges, set from the three-dots menu.

7 Sorting

Use the **Sort by** control in the controls area. Options are:

- Product A–Z (the default)
- Price: low to high
- Price: high to low
- Size: smallest to largest
- Size: largest to smallest
- Sugar: low to high
- Sugar: high to low
- Sweetness (see below)
- Tannins: low to high (by level: None, Low, Medium, High)
- Tannins: high to low
- Most loved — wines with the most Loves first (Section 8)

There is no Brand A–Z sort: brand is a filter, in the filter menu only (Section 6).

Sweetness order. The Sweetness sort — and the Sweetness choices in the filter menu and the editor — run **Extra Dry, Dry, Off-Dry, Medium** (driest to least dry), then **Extra Sweet, Sweet** (sweetest first). Products sharing a sweetness sort A–Z, and products with no sweetness recorded sit last.

Max price sorts for you. While a Max price is entered (Section 6), the list sorts itself with the most expensive products at the top, down to the least expensive, and unpriced products last — whatever Sort by says. Clear the Max price and the list returns to the sort you had before.

Most loved ranks wines by their shared Love count — the same count shown as “Loved by X merchants” on a wine’s card — so the team’s most recommended wines come first. Wines nobody has Loved yet sit at the end.

Sorting changes only the on-screen order, not any product data.

Scroll-to-top button

When you scroll **up**, a 40px plum circle appears at the bottom right. Tap it to smooth-scroll back to the top. It hides again when you scroll down or reach the top. There is no floating Search pill. A sale card, too, is only taller when it truly shows the three-line Sale / Reg / Save block; other cards keep their normal height (Section 4).

8 Product details

Tap a product entry to expand it. Each entry ends in a subtle bottom bar with muted “tasting notes” text and a chevron; tap to open, and tap again to close — there is no “Tap to expand / collapse” pill. When open, card and notes join into one tall card, so the notes belong to the product above.

Expanded colours. Cards alternate between two shades only. Expanding keeps the main card in **exactly its collapsed colour**; only the notes area flips to the other shade — never dark plum, black or a third colour.

Figure 2 — Expanded product: the notes sit flush under the product above, and the three-dots button is in the product’s right-hand corner. Schematic only.

What the expanded details show

- **Tasting notes** — the notes recorded for that product.
- **Product ID** — the number, and the only identifier shown in the expanded details.
- **Loved by X merchants** — shown directly under the badge line on the card, only when at least one person has Loved the wine (see Loving a wine, below).
- **Most loved** — a line above the tasting notes with the Most loved badge, on the wine(s) with the highest Love count.
- **Comments icon** — a speech bubble labelled Comments, with a count badge when the wine has comments; comments stay hidden until pressed (next page).

Everything else is already in the entry itself (Section 4), so the expanded area stays short: notes, Love count, comments icon and product ID.

Loving a wine — the heart

Every product card has a **heart** beside its three-dots menu, showing **your** Love only: **hollow** when you have not Loved it, **filled red** when you have. Tap to toggle.

Loving needs sign-in. If you tap a heart while signed out, the sign-in prompt appears and no Love is saved until you sign in (Sections 1 and 11).

On a wine’s card, directly under the badge line, you may see **“Loved by X merchants”** (or “Loved by 1 merchant”). That is the shared count of everyone who has Loved the wine, shown only above zero. See also the **Loved** filter (Section 6), the **Most loved** sort (Section 7) and **Loved wines** in Documents (Section 11). The highest-count wine(s) also carry the **Most loved** badge in the list and above the tasting notes here.

Reading sweetness and sugar together. Sugar (RS) is the measured number in g/L; Sweetness is its label. See Wine Knowledge (Section 12) for the ranges.

8 Product details (continued)

Wine comments — the comment icon in the notes

Every wine can carry comments from the team — a tasting impression, what a customer said, a note to check the next delivery. Comments live **inside the wine's expanded notes only**: there is no comment button on the product card itself, and nothing about comments appears in the list, in search results or in the filters.

The comment icon and its count badge

Expand a wine's notes and, under the tasting notes, you will find the **comment icon** — a speech bubble labelled **Comments**. When the wine has comments, a **number badge** on the icon shows exactly how many there are. A wine with no comments shows the icon with **no badge**.

Reading comments — only when the icon is pressed

The comments themselves stay **hidden until you press the icon**. Press it and that wine's thread opens right there in the notes, **newest first**, each comment showing who wrote it and when. Press the icon again to hide the thread, and closing the wine's notes hides it too. **Anyone can read** a thread — browsing is open, so you do not need to sign in just to read.

Adding, editing and deleting your comments

- **Add:** open the thread, type in the comment box and tap **Send**. Posting needs sign-in: if you are signed out, the sign-in prompt appears and nothing is posted until you sign in.
- **Edit:** your own comments carry an **Edit** button — tap it, change the text in place, and save.
- **Delete:** your own comments carry a **Delete** button — tap it, then tap again to confirm.
- You can only edit or delete **your own** comments. Other people's comments show no Edit or Delete buttons for you.

Comments never slow down searching. No comments are loaded while the list renders, while you search or while you filter. The count badges are fetched in the background *after* the list appears — one grouped count covering every wine — and they refresh on the normal 30-second re-check and straight after you post or delete, so badges stay current without a reload. A thread itself loads only when you press its icon.

If an opened thread shows a short "not set up yet" message instead of comments, tell Michael — the rest of the app keeps working, and no count badges appear until it is set up.

9 Editing a product — the three-dots menu

Each product has a **three-dots (⋮) button** in its right-hand corner. Tap it for that product's menu. **Every item in this menu needs sign-in** (Section 11): if you are signed out, tapping one brings up the sign-in prompt and nothing changes:

Menu item	What it does
Edit product	Opens the full editor (below).
Mark unavailable at this store / Mark available	Toggles availability **for the store you are viewing only**. Unavailable products show the red UNAVAILABLE banner.
Not in plano — On / Off	Toggles whether the product is recorded as Not In Plano.
Cooler — On / Off	Toggles whether the product is flagged as a cooler product **at the store you are viewing only**. Cooler status is per store — changing it here does not change any other store.
On sale — On / Off	Manual sale toggle for a one-off sale. Dated-schedule products (Section 13) are re-derived from the date on refresh.
Sale price not working	Flags a sale whose price is not going through at the till (signed-in only). The product shows the amber warning badge and a warning in its expanded details (see the continued pages).

The editor

Edit product opens a form with: Brand, Product name, Size, Regular price ($), On sale (No / Yes — show pink SALE badge), Sale price ($) — **Regular price and Sale price are always both shown** —, Sugar — RS (g/L), Sweetness, Style / Richness, Varietal, Tannins, Acidity, In cooler — this store only (Not set / Yes / No), VQA (No / Yes — show VQA badge), List status (Planogram / Not In Plano / Check), Availability — this store only (Available at this store / Unavailable at this store), and Tasting notes. The **Barcode** section sits at the very **bottom** of the form, just above Save / Cancel.

- **Varietal** is a dropdown. Choose the add-new option to type a varietal that is not listed.
- Sweetness for BASK products is Extra Dry. If a BASK product shows anything else, correct it in the editor.
- **Barcode (bottom of the editor)** — the section is headed "Barcode — scanning it opens this product". A status line shows the barcode currently registered to this product, or says none is registered, and updates as you type to say what saving will do. Type the number, or tap **Scan barcode with camera** to scan it straight into the field with the full-screen scanner and come back to the editor to save. **Clear barcode** empties the field. Saving writes the change to the shared list as its own barcode-only update: the new barcode opens this product, the old one stops pointing to it straight away, and a barcode taken from another product is removed there.
- Tap **Save for all stores** to save, or **Cancel** to discard.

Global vs per-store — read before saving. Price, tasting notes and product info are **global**: a save changes them for every store and user. Availability and cooler status are **per store**: those editor settings change only this product, for the store you are viewing.

9 Editing a product (continued)

Sale prices — Sale / Reg / Save

When a product is on sale, its Price area shows three lines together — on the card and again in the expanded details:

Line	Meaning
Sale	The sale price — what the customer pays — in pink.
Reg	The recorded regular price, shown muted.
Save	The saving: regular minus sale, in pink.

Sale and Reg always print to the cent. A whole-dollar saving prints without cents (for example “Save $3”). The Reg and Save lines appear only when a regular price higher than the sale price is recorded — otherwise the Sale line stands alone.

Regular price in the editor

The editor always shows both price fields. **Regular price ($)** always holds the everyday price, whether or not the product is on sale. **Sale price ($)** sits under the On sale control — leave it blank to keep the regular price as the sale price.

Sales clear themselves

Once a sale period ends, the on-sale flag and the sale price clear automatically — including a manually entered sale. The product returns to its regular price, and the regular price is never touched by the clearing.

Impact sales are locked

If a product’s sale comes from a dated impact schedule (Section 13), the editor shows a note saying so, and that sale is **locked**: its sale price is set by the impact, not typed in the editor, so it cannot be changed or switched off by hand while its window is running. The Regular price stays editable. When the window ends, the product returns to its regular price on its own.

“Sale price not working” — flagging a pricing error

For a product on sale, the editor — and the three-dots menu — has a **Sale price not working** flag (signed-in only). Set it to **Yes — flag a pricing error** when the product is meant to be on sale but its sale price is not going through at the till. The product then shows an **amber warning badge** under its name, beside the SALE badge, and a matching warning line in its expanded details, so any staff member can see at a glance that the sale price needs attention. The flag is shared, so it shows on every phone. Set it back to **No — sale price is working** once the price is going through again.

9 Editing a product (continued)

Tag price and the register total

The price on a card is the **tag price**, shown with **“+tax & dep”**. Open the expanded details to see both figures, as **“Tag price $X”** and **“At the register $Y (incl. 13% HST + $Z deposit)”**.

- **HST is 13%**, charged on the price.
- **The deposit is not taxed.** The register total is price + 13% HST + deposit.

Container	Size	Deposit
Glass, PET, Tetra Pak or Bag-in-box	630mL or under	10 cents
Glass, PET, Tetra Pak or Bag-in-box	Over 630mL	20 cents
Can	1L or under	10 cents
Can	Over 1L	20 cents
Any container	100mL or under	Exempt — no deposit

Where the prices and notes come from

Regular prices now come from the **P8 and P9 Legacy Boutique price lists** — where the two lists differ, P9 wins — and they are **baked into the app**, so the price on first paint and offline matches the shared list. That update did not touch any sale prices. **Tasting notes and sugar** come from the romance and shelf tags, and where a tag and web research disagree, **the tag wins**.

New products in this edition

Nine products joined the built-in list, each with its list price: Bodacious Cabernet Sauvignon 750mL $11.99; Inniskillin Merlot $14.99; Inniskillin Riesling $14.99; Inniskillin Reserve Riesling $19.99; Inniskillin Reserve Sauvignon Blanc $19.99; Inniskillin Unoaked Chardonnay $14.99; Inniskillin Reserve Cabernet Franc Rosé $19.99; Blake Boulevard Cabernet Sauvignon 750mL $17.99; and Jackson-Triggs Proprietors’ Selection Cabernet Sauvignon Light 750mL $11.99, from the price lists. The eight products found on tags are ticked for **store 358’s** assortment; the Light is in the built-in list but was not ticked for 358.

10 Adding a product

1. Tap the **Settings gear** (top right).
2. Scroll to **Store settings** at the bottom of the Settings tab and tap its heading to expand it.
3. Tap **Add product** — described as “Add a new wine to the global product list”, inside Store settings.
4. Fill in the same editor fields as in Section 9 and save. **You must be signed in** to add a product (Section 11) — if you are signed out, you will be asked to sign in first, and the add does not go ahead until you do.

A new product joins your current store straight away. Saving adds it to the global product list **and** to the store you are viewing at the same time: it appears immediately, counts in the “Showing … of …” total, is searchable, and scans straight to it — no separate ticking step for your own store. The same applies to a scan’s **Add as a new product** (Section 3).

It is **not** auto-added to any other store. A product can exist in the shared catalogue for stores that carry it, without appearing in stores that do not.

Adding it to another store

1. Switch to that store (Section 2).
2. Open Settings → Store settings (on the Settings tab) → Set store products.
3. Find the product in the checkbox list, tick it, and save. It now appears in that store’s list too.

One exception: a product that was added *before* this behaviour started may exist on the global list without belonging to your store. Tick it once in Set store products (above) and it will stay in your store from then on.

11 Settings

Tap the **gear icon** at the top right to open the panel. At the **very top of the panel** are four tabs — **Settings**, **Documents**, **Support** and **Games & Contests** — and the panel opens on Settings every time. The first thing **inside the Settings tab**, below the tabs, is the **Account** block — your sign-in status (next page). It lives in that tab only. The **Settings tab** also holds Suggestions, Appearance and, at the very bottom, Store settings and the Admin entry. The **Documents tab** holds the impact PDFs, the Current Impact Cheat Sheet, Loved wines and this manual. The **Support tab** holds, in order, Support Center, What’s on sample today? and Wine Knowledge. The **Games & Contests tab** holds Wine Trivia, Guess the Wine and Winerack Contests. Tap **Close** at the bottom to leave the panel — Close is shown on every tab:

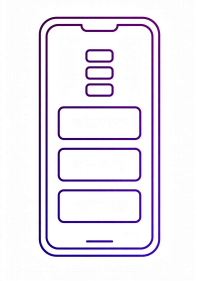

Figure 3 — The panel behind the gear, with its four tabs: Settings, Documents, Support and Games & Contests. Schematic only.

Account — the first thing in the Settings tab

The **Account** block sits at the top of the **Settings tab**, directly below the Settings – Documents – Support – Games & Contests tabs, which sit at the very top of the panel. It is the first thing in that tab, it appears in that tab only, and it always shows your sign-in status:

- **Signed out:** the block shows “Not signed in”, with the **Sign in with Google** button **centred** in the card.
- **Signed in:** the block shows the name and email of the account you are signed in with, and a **Sign out** button.
- The Account buttons are **centred**: Sign in with Google, and — once signed in — Save display name, Use my Google name instead and Sign out.

Tap **Sign in with Google** and complete the Google sign-in. You return to the app signed in. Your session **persists across visits**: on that phone you stay signed in, so you normally sign in once, not again on every open. Tap **Sign out** in the Account block to sign out on that phone.

Under the button, the card explains itself in these words: *“You’re seeing this because you’re not signed in. You can browse and search without signing in — signing in lets you love wines and add or edit products, so your loves are yours and your changes carry your name.”*

Coming back from Google. The app works out its return address from where it is actually served, so signing in on the live app brings you back to the live app. For that return to work, the live app address must be listed in Supabase under Authentication → URL Configuration, as the Site URL and in the Redirect URLs — if sign-in ever lands on a dead page instead of returning to the app, that setting is the place to check (Section 15).

Browsing never needs sign-in. You can browse, search, filter, sort and scan without an account. Sign-in is only needed to **Love** a wine or to **edit or make changes of any kind** — Edit product, Add product, Mark unavailable, Not in plano, the Cooler and On sale toggles, linking a barcode, and Admin appointments and bans. Tapping any of those while signed out brings up a sign-in prompt, and the action does not proceed until you sign in. See Sections 1, 8, 9 and 10.

Display name — appear under a name you choose

Inside the signed-in Account block is the **Display name** setting. Your Google account name is not always the name you want the team to see. Set a display name and that name is used **everywhere your name appears** in the app: the Account block itself, your wine comments, your suggestions and their replies, change-history entries, and the signed-in users list in Admin.

- Type the name (up to 60 characters) and tap **Save display name**. You can change it at any time.
- Tap **Use my Google name instead** to clear it and go back to your Google account name — with no display name set, your Google name is used.
- It is **per user**: it changes only your name, never anyone else’s, and it is stored against your account, so it follows you from device to device.

The note under the heading always tells you how you currently appear, so you can check before you save. Under the Account block, a line also confirms: *“Your loves are saved to your account, and products you add or edit are tagged with your display name in the change history.”* Change history itself is Admin-only now — see the Admin page later in this section.

Appearance — Light / Dark / Auto

Option	Meaning
Light — Default	The light look. **Light is the default**: on a first open, with no saved choice, the app shows Light.
Dark	The dark purple look, at all times.
Auto — Follow phone	Follows your phone's light / dark setting, and updates if the phone setting changes. Only Auto follows the phone.

Your choice is saved on this device and restored on reload, before the list paints, so there is no flash of the wrong look. Appearance is never synced to the shared list, and choosing Dark or Light on one phone does not change anyone else's phone.

Documents — the Documents tab

Tap **Documents** at the top of the panel. The tab shows its contents straight away, in this order:

- **Full P8 Impact PDF** and **Full P9 Impact PDF** — the complete impact documents, first in the tab, each shown only while its period is running.
- **Current Impact Cheat Sheet** — date-aware: it only ever shows the period actually running today — P8 until 8 November, then P9 from 9 November.
- **Loved wines** — only Loved wines, most loved first; tap one to open it (Section 8).
- **Product Info Manual** — the manual, at the bottom of the tab; on a phone it opens as a responsive web page that fits your screen.

What's on sample today? and Wine Knowledge are **not** in Documents — both live in the Support tab (below).

Expired impacts remove themselves

The impact entries keep themselves current. The Full P8 Impact PDF (12 October – 8 November 2026) leaves the Documents tab after 8 November, and the Full P9 Impact PDF (9–29 November 2026) leaves it after 29 November — automatically, leaving no empty or broken entry behind. The cheat sheet never shows an upcoming period before it starts, and after 29 November the cheat-sheet entry leaves Documents as well, rather than showing an old sheet. Left open across midnight, the app re-checks the date and hides expired entries without a reload.

> **Documents follow the store type.** Those are Legacy Loblaws documents, and only a **Loblaws** store sees them. If the current store's type is Sobeys, Foodland, Non-boutique or a custom type, the Documents tab instead shows a note that the impact for that store type is not loaded yet. Change the type in Store settings (below) if it is wrong — see also Section 2.

What's on sample today?

In the **Support tab**, second in that tab, after Support Center. This date-aware panel shows today's sampling wines. A sampling window counts only if today falls inside it, so a past window's wines never appear as today's samples — and never as the next window either. Outside any window, the panel says nothing is on sample today and shows the next upcoming window; after 29 November 2026 it says the sampling schedule has ended, with no wines listed. If the app is left open, the panel is re-checked when the day changes. Cartier appears on Fridays and Saturdays only.

Support Center — the Support tab

The **Support tab** holds, in order: **Support Center** first, then **What's on sample today?**, then **Wine Knowledge**. Support Center holds the Wine Rack Store Support Centre contacts (sheet last updated 21 April 2026). Contacts are grouped under Support Services, Marketing, Operations, Marketplace, Distribution/Shipment/Store Ordering, and HR/Payroll/Safety. Each entry shows the name with phone number and email where the sheet gives them: tap a number to call, or an email to email it.

Store settings — at the bottom of the Settings tab

Store settings is the last section on the Settings tab. It is collapsible: a full-width tappable heading bar with a large chevron and a **Tap to expand** / **Tap to collapse** pill. It starts collapsed; its heading shows the current store as a subtitle. Inside, in order:

- **Store type for the current store** — pick Loblaws, Sobeys, Foodland, Non-boutique or a custom type. The type decides which impact the store sees (Section 2).
- **Available store types** — the full list of types. Custom types are marked as added, and the current store's type is highlighted.
- **Add new store type** — tap the button, type a name, and save. Blank and duplicate names are rejected. The new type joins the list straight away, appears in every Store type dropdown, and behaves like Sobeys and Foodland for impact until its own impact document is added.

Add product

Near the bottom of Store settings. Opens the Add product editor. See Section 10 — a new product joins the global list **and your current store** straight away; it is not auto-added to other stores. Add product is no longer a separate top-level Settings entry.

Set store products

At the very bottom of Store settings. Described as "Choose which products the current store carries". It opens a checkbox list headed "Products this store carries — tick to include", with **Tick all shown** and **Untick all** shortcuts, a store-number field, and an Add store option (which also asks for its Store type).

- Tick = this store carries the product. Untick = it does not.
- Ticking only sets which products this store carries, from the one shared list.
- Price, notes and product info are global and are never changed or copied per store here.
- Saving a store here updates the shared list, so every user sees the same stores and the same products in each. Tap **Save store** to save, or **Cancel**.

Footer — sync status, version code and credit

At the bottom of the Settings tab: a sync status line (for example "Connecting to the shared list…"), the credit line — **Created and maintained by Michael Benia WR 358** — and the **version code**, shown as **Version: 2026.11.04.14**.

> **Use the version code to tell if you are on an old tab.** It changes on **every push** of a new build. When this manual was updated, the live version was **2026.11.04.14**, and every later push raises the code again. If Settings shows an older code, you are on a cached old tab: close **every** Grapevine tab, then open a fresh one.

Tap **Close** at the bottom of the panel to leave it — Close is shown on every tab.

11 Settings (continued)

Suggestions — tell the moderator

On the **Settings tab**, directly under the Account block, is the **Suggestions** button — “Leave a comment or suggestion for the moderator, and edit or delete your own — sign-in required”. Use it for ideas, corrections and requests about the app and its list.

- **Sign-in required.** Suggestions are signed-in only: if you are signed out, tapping the button brings up the sign-in prompt first, and nothing is sent until you sign in.
- **Send:** type your suggestion and send it. A **thank-you message** appears in the panel to confirm it went through, and the suggestion appears straight away in **Your suggestions** under the form.
- **Your suggestions:** that list shows **only your own** suggestions. Each carries **Edit** and **Delete** buttons that work only on your own entries — Edit changes the text in place; Delete asks you to tap again to confirm.
- **Acted upon and replies:** an admin can mark your suggestion **Acted upon** — the tag shows who did it and when — and can **reply** to it. The Acted upon tag and any replies appear under your suggestion in Your suggestions, replies oldest first, so you can follow what happened without having to ask.

Admins read every suggestion in the Admin area (next page), which is where the Acted upon marks and replies are made. Other users do not see your suggestions anywhere in the app — only you see them, in Your suggestions, and the admins see them in Admin.

Suggestions are for the app; comments are for a wine. To say something about one wine — how it tastes, what a customer thought — use that wine’s comment icon in its notes instead (Section 8). Suggestions go to the moderator about the app and the list as a whole.

Admin — the restricted backend

The **Admin** entry sits at the bottom of Settings, **above the "Shared list connected" line**, described as "Admin functions and tools — appointed users only". It opens a restricted backend area.

> **Restricted.** Only **Michael** — signed in as **halroben8@gmail.com**, the default admin — and users he has appointed can open Admin. Any other user gets a restricted message.

What Admin shows

- **Signed-in users** — everyone who has logged in, with name, email and last seen. It opens in its own window from the **Open Signed-in users** button in Admin, so the Admin page stays short. Each user's row carries its own **Make admin** and **Ban** buttons — that list is the only place admins are made and bans are set (see below).
- **The full action log** — every recorded action, newest first, one line per action: who added a price, who modified a product, who added a product, and so on, with the product named.
- **Change history** — the record of product changes: the product, what changed, who made it and when, newest first. It opens from the **Open Change history** button in Admin, in its own dedicated, near-full-screen view. A red **Clear history** button in that view's footer clears it, with an inline two-step confirm. Change history lives **only** in Admin — it is no longer shown on the Settings tab, and only appointed admins can see it. The logger records entries even when a field is missing, so entries are not lost.
- **Suggestions** — every user's suggestions, where an admin can mark one **Acted upon** and **reply** to it (see Suggestions, earlier in this section).

Making an admin

Admins are made from the **Signed-in users** list only — there is no appoint-by-email. Tap the **Make admin** button on a user's row to appoint them; on an admin's row the button reads **Remove admin** and takes the appointment away. Only **Michael** sees and controls the Make admin and Remove admin buttons. Appointed admins can open Admin and use its lists and its Ban buttons.

Banning and blocking a user

An admin can **ban (block)** a user with the **Ban** button on their row in the signed-in users list — there is no ban-by-email. On a banned user's row the button reads **Unban**. Bans and unbans are written to the action log.

- A banned user is **signed out** and shown an **"Account blocked"** notice. The block is checked on sign-in and while the app is open, so it takes effect straight away.
- A banned account **cannot use signed-in features**: it cannot Love wines and cannot add or edit products.
- **Browsing stays open** — a banned account can still view the product list; only sign-in features are closed to it.
- Banning is **reversible**: unban them with the **Unban** button on their row, and they can sign in and use the app normally again.
- **Michael cannot be banned** (halroben8@gmail.com, the default admin), and nobody can ban themselves.

If the Admin lists show a short setup message instead of the users and the log, tell Michael — the rest of the app, including sign-in and Love, keeps working.

11 Settings (continued)

Food pairing finder — only on the header button

The **Food pairing finder** button sits under the store pill in the header, under the 358 pill at store 358. That button is the **only** way into the finder — it is not in the Support tab and not in Documents.

1. Tap the **Food pairing finder** button under the store pill.
2. Type a dish. The finder opens as a pop-up over the list.
3. Read the recommendations: the closest best match first, then backups, with a reason for each.

- Recommendations come **only** from wines the current store actually carries and has not marked unavailable.
- Each reason is tailored to the dish you actually typed — for example a spicy dish, a creamy dish, a tomato dish, grilled steak, a named fish, or a dessert.
- Savoury pies are treated as savoury, not sweet: shepherd's pie, cottage pie, meat pie, chicken pot pie, steak pie and tourtiere all pair as savoury dishes.

Not in Support. The Support tab holds Support Center, What's on sample today? and Wine Knowledge, in that order. If you are looking for the food pairing finder there, go back to the header button under the store pill.

11 Settings (continued)

Games & Contests — the fourth tab

The panel behind the gear has a fourth tab, **Games & Contests**. It holds three items: **Wine Trivia**, **Guess the Wine** and **Winerack Contests**.

Wine Trivia — rapid-fire

- **60 seconds.** A timer runs for the full 60 seconds, with a sticky scoreboard and timer and a shrinking time bar that stay in view while you play. A rising C–E–G–C starting sound plays at the start, and the full 60 seconds is preserved.
- **Four answers in a 2 by 2 grid.** Tap an answer to move on.
- **Correct:** the answer turns green, a ding sounds, and the next question follows with **no delay**.
- **Wrong:** the answer turns red, a buzzer sounds, and there is a **3-second delay** while the clock keeps running, so you can see the right answer.
- **139 general questions.** The set is general wine knowledge, and the phone vibrates on Android where that is supported.

High scores

The shared **High Score** board shows the **top 3 only**, and only on the trivia start page — there is no separate High Score button. It is **one spot per player, best score only**: the board lists the top 3 distinct players, each with their best score, and names match regardless of capitalisation, so one player can never hold 1st, 2nd and 3rd at once. A new score replaces your own spot only if it beats your best; a lower score is not saved and the board keeps your best. If your score makes the top 3, a congratulations message appears with a name field prefilled from your signed-in display name.

Guess the Wine — from its tasting notes

- **10 rounds, no timer.** Read the tasting notes, then pick the bottle they belong to from four choices in a 2 by 2 grid — take your time and read properly.
- **The wines are from the store you are viewing** — only wines that store carries, and only wines whose notes do not name the brand or product, so the answer is never given away. The same wine in a different size never appears twice in one round, because the notes are the same across sizes.
- **Hints:** each round also shows the wine’s sweetness and style, as small labels under the notes.
- **Correct:** the answer turns green and a ding sounds. **Wrong:** the answer turns red, a buzzer sounds, and the right bottle is shown in green.
- **Scores stay in that session only** — there is no shared board for this game, and it never touches the trivia High Score board.

Winerack Contests

Winerack Contests is a “Coming soon” placeholder. It submits nothing and syncs nothing.

12 Wine Knowledge

What it is

Wine Knowledge is a reference panel built into the app. It comes from the Liquid Learning “Intro to Red Wine” training, with the white wine varietals added from general wine knowledge. Use it as a quick refresher while you work — for example, to check a sweetness level, remind yourself what tannins feel like, or look up a varietal before answering a customer.

How to open it

1. Tap the **Settings gear** at the top right of the app.
2. Tap the **Support** tab at the top of the panel.
3. Tap **Wine Knowledge** — third in that tab, after Support Center and What’s on sample today?.
4. The reference panel opens as a stack of topics.

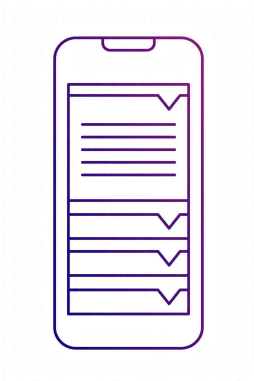

Figure 4 — Wine Knowledge: tap a topic heading to open it, tap again to close it. Schematic only.

How to use it

Each topic is a collapsible section, and **every topic starts collapsed — none is open by default**. **Tap a topic heading to open it, and tap it again to close it.** Open the one topic you need, read it, then close it or open another — the panel stays compact on a phone because only the topics you tap are open.

Topics in the panel, in order

- How to taste (the 5 S’s)
- Sweetness chart
- Tannins
- Acidity
- Alcohol
- Body
- Flavour intensity
- Finish
- Common red wine aromas and flavours
- Judging a wine
- Aging (stainless steel vs oak)
- Food pairing 101
- Red varietals we carry
- White varietals we carry

The two “varietals we carry” topics are split into red and white, and list each varietal’s typical characteristics only — they do not list example wines.

Reference only. Wine Knowledge does not change product data. Opening, reading or closing a topic does not add, edit or sync anything in the product list — to change a product, use its three-dots menu instead (Section 9).

13 Sales and LTOs — the dated sale schedule

Sale prices and the On sale flag for the products in this section are **computed at runtime from the date**. The app's date-aware schedule has three windows (all dates inclusive, local calendar):

P8 LTOs — 12 October to 8 November 2026: the 15 products in Table C show the pink SALE badge and their P8 sale price.
P9 LTOs — 9 to 29 November 2026: the 10 products in Table A show the pink SALE badge and their P9 sale price.
Black Friday Flash Sale — 16 to 30 November 2026: the 2 wines in Table B are $3.00 off. This window overlaps P9 and runs one day into P10.
Outside a product's window: it shows its regular price again, with no sale badge from this schedule.

There is nothing to switch on or off by hand: the app re-derives the sale state from the calendar on first paint and after every shared-list load or refresh. A dedicated day-change check also runs every 30 seconds and whenever the app comes back to the foreground — and it is never paused by an open panel — so an app left open across midnight into a window switches on its own, and one left open past the end switches off on its own, with no reload needed. When a sale switches, the list immediately re-sorts by price and re-applies the Max price filter and the On sale filter.

Size matters. Only the size listed qualifies — a different size of the same product is not part of that sale.

One product bridges P8 and P9. Jackson-Triggs Reserve Sauvignon Blanc VQA 750mL is an LTO in both periods at the same $12.99 sale price, so it stays on sale without a break from 12 October to 29 November.

Not an LTO: the P9 feature wine, Vintage Ink Tequila Barrel Aged Sauvignon Blanc VQA (750mL, $17.99), is a **Buy 2, Save $6** multibuy for 9–29 November, with no single-bottle sale price in the app.

Table A — P9 LTOs, 9–29 November 2026

Product ID	Product	Size	Regular	Sale price 9–29 Nov
80090370	BASK Sauvignon Blanc	3L	$37.99	**$34.99**
80100035	Bù Cabernet Sauvignon	750mL	$15.99	**$13.99**
80100036	Bù Chardonnay	750mL	$15.99	**$13.99**
80003853	Inniskillin Discovery Series P3 VQA	750mL	$22.99	**$19.99**
988102	Inniskillin Riesling Pinot Grigio VQA	750mL	$14.99	**$13.99**
80003392	Jackson-Triggs Reserve Sparkling VQA	750mL	$16.99	**$15.99**
618421	Jackson-Triggs Reserve Merlot VQA	750mL	$13.99	**$12.99**
618413	Jackson-Triggs Reserve Sauvignon Blanc VQA	750mL	$13.99	**$12.99**
80010507	Jackson-Triggs Proprietors' Selection Merlot	4L	$43.99	**$41.99**
80010385	Jackson-Triggs Proprietors' Selection Sauvignon Blanc	4L	$43.99	**$41.99**

Table B — Black Friday Flash Sale, 16–30 November 2026

Product ID	Product	Size	Saving	Sale price 16–30 Nov
80020465	Inniskillin Discovery Series Susse Reserve Riesling VQA	750mL	$3.00 off	**Regular price − $3.00**
80011979	Jackson-Triggs Grand Reserve Shiraz VQA	750mL	$3.00 off	**Regular price − $3.00**

During 16–30 November these two wines show the **Flash Sale** badge — black with yellow text — with a **gold ring** around the row, and a price $3.00 below their recorded regular price. The Flash Sale ends at the end of 30 November — one day after P9 ends.

Table C — P8 LTOs, 12 October – 8 November 2026

Product ID	Product	Size	Regular	Sale price 12 Oct–8 Nov
80085897	BASK Pinot Noir	750mL	$12.99	**$11.99**
80098877	BASK Reserve Simply White VQA	750mL	$15.49	**$13.49**
317016	Inniskillin Cabernet Franc VQA	750mL	$14.99	**$12.99**
219543	Inniskillin Late Autumn Riesling VQA	750mL	$14.99	**$12.99**
80010511	Jackson-Triggs Proprietors' Selection Pinot Grigio	4L	$43.99	**$41.99**
377820	Jackson-Triggs Proprietors' Selection Merlot	1.5L	$19.99	**$18.49**
80010517	Jackson-Triggs Proprietors' Selection Cabernet Sauvignon	4L	$43.99	**$41.99**
618413	Jackson-Triggs Reserve Sauvignon Blanc VQA	750mL	$13.99	**$12.99**
526228	Jackson-Triggs Reserve Meritage VQA	750mL	$13.99	**$12.99**
80059526	Jackson-Triggs Reserve Pinot Grigio VQA	750mL	$13.99	**$12.99**
80099662	Saintly The Good Rosé VQA	750mL	$17.99	**$15.99**
80087083	Sandbanks Reserve French Kiss Merlot-Cabernet VQA	750mL	$17.99	**$15.99**
80098997	Sidney Rosé	750mL	$13.99	**$11.99**
80060252	Vintage Ink Wicked White VQA	750mL	$16.99	**$14.99**
80060253	Vintage Ink Rebel Red VQA	750mL	$16.99	**$14.99**

When a sale period ends, the on-sale flag and the sale price clear automatically — including a manually entered sale — and the product returns to its regular price. The regular price itself is never touched by that clearing (Section 9).

The **On sale** filter (Section 6) finds these products while their window is running: turn it on during a window to see only products on sale.

14 Shared data and sync

Grapevine is a **shared app**. All users see each other's adds and edits, because everyone works from the same shared list.

- **Re-checks every 30 seconds.** While the app is open it re-checks the shared list every 30 seconds, so another user's change normally appears within half a minute without reloading.
- **Edits in progress are protected.** The refresh is skipped while any dialog is open, so an edit you are typing is never overwritten mid-type. The sale day-change check (Section 13) is the exception: it runs even while a panel is open, so sales still switch on the day.
- **Global:** price, tasting notes and product information. Change them once and every store and user sees the change.
- **Tagged with who made them:** adds and edits are saved under the signed-in user who made them, and are listed in Change history in the Admin area (Section 11). Loves are saved to your own account; the count — "Loved by X merchants" — is shared, so everyone sees the same total.
- **Comments:** wine comments are shared — anyone can read them — and their count badges refresh on the same 30-second re-check and straight after you post or delete. Posting, editing and deleting are tied to your own account: you can only change your own comments.
- **Suggestions:** a suggestion is shown only to the person who sent it (in Your suggestions) and to admins (in the Admin area), together with its Acted upon mark and any replies.
- **Your name:** your display name (Section 11) is stored against your own account and used for your comments, suggestions and history entries. It never changes anyone else's name.
- **Per store only:** which products a store carries (Set store products, in Store settings), Mark unavailable, each store's cooler values, and the store's type — which decides which impact that store sees. Changing any of these affects only that store. Cooler is per store and, for now, per device, until the shared cooler table exists.
- **Security, stated plainly:** admin, banned-user and suggestion rows are delivered under open database policies, so admin-only and own-only visibility is enforced by the app's interface and its query scoping, not by the database itself. A real fix needs tighter database policies, which Michael has not yet approved.
- **On this device only:** the Appearance choice (Light / Dark / Auto). It is never synced.
- **By date only:** the dated sale state in Section 13 is derived from the calendar at runtime; it is not a manual edit.

Before you edit, ask: global or per-store? If you only mean your store, use Mark unavailable, the Cooler toggle, or Set store products (Settings → Store settings). If you edit price, notes or product info, you are editing it for everyone.

15 Troubleshooting and FAQ

A product I added does not show in my store's list.

It should: a newly added product joins the store you were viewing as well as the global list, and appears straight away (Section 10). Check you are viewing the store you added it from, clear the search and filters, and wait for the 30-second refresh or reload. It is not added to other stores automatically — for another store, tick it in Settings → Store settings → Set store products while viewing that store. A product added before this behaviour started may also need that one tick for your store.

My store's list is empty.

The store has no products set yet. The app says so on screen: use the Settings gear (top right) → Store settings → Set store products to tick the products it carries.

No products match those filters.

Clear the search, then tap Reset filters, then set one filter at a time. Remember search and filters combine.

A product shows the wrong sweetness.

Open its three-dots menu → Edit product and correct Sweetness and Sugar — RS together, so the label matches the g/L number in the Sweetness chart in Wine Knowledge in the app (see Section 12). BASK products are Extra Dry.

I tapped the heart but my Love did not stick.

Make sure you are on the current build first: close every Grapevine tab and open a fresh one — Loves save reliably in the current version. Check you are signed in (a Love needs sign-in), then tap the heart again. A filled red heart, and the "Loved by" count on the wine's card, confirm it saved.

I cannot see a wine's comments.

Comments are hidden until you ask for them: expand the wine's notes and press the **comment icon** there. The number badge on the icon shows how many comments there are — no badge means none yet. Reading is open to everyone; posting, and editing or deleting your own, need sign-in (Section 8).

I marked a product unavailable, but another store still shows it as available.

Correct — availability is per store. Mark it unavailable while viewing that other store if it is unavailable there too.

More troubleshooting

The first-visit store popup keeps appearing.

Pick your store each time it appears — picking changes no product data. Adding a store from the popup asks for its Store type (Section 2) and creates it with no products ticked; set them afterwards in Settings → Store settings → Set store products.

The app is in the wrong light / dark look.

Open Settings and check Appearance. If it is set to Auto, the app is following your phone. Choose Light or Dark to fix the look regardless of the phone setting. Light is the default on a first open.

A sale badge is showing — or missing — unexpectedly.

Check the date first. Each product in Section 13 is on sale only inside its own window — P8: 12 Oct–8 Nov; P9: 9–29 Nov; Black Friday Flash Sale: 16–30 Nov 2026 — re-derived on load, on the 30-second refresh, and by a day-change check that also runs when the app comes back to the foreground and is never paused by an open panel. A manual On sale toggle on a scheduled product lasts only until the next load or refresh.

The sale price is not going through at the till.

Flag it so the whole team can see: three-dots menu → Edit product → **Sale price not working** → Yes. The wine gets an amber badge under its name and a warning line in its details until someone sets it back to No (Section 9).

I appear under the wrong name.

Set a display name: Settings gear → Settings tab → Account → **Display name** → Save display name. It is then used on your comments, suggestions and history entries. Clear it with “Use my Google name instead” to go back to your Google name (Section 11).

Where are Wine Knowledge and today’s samples?

They moved. Both are in the **Support tab**: Support Center first, then What’s on sample today?, then Wine Knowledge. Neither is in Documents any more.

Where is the food pairing finder?

Only on the **Food pairing finder** button under the store pill in the header. It is not in Support and not in Documents (Section 11).

Someone else’s edit has not appeared yet.

Wait up to 30 seconds with no dialog open (the refresh is paused while one is open), or reload the app. Check the sync status line on the Settings tab if it still has not appeared.

I cannot find a filter I used before.

It may have been removed. Priced only, In cooler only and Planogram only are not in the current app. Use the product badges and the Brand (filter menu only), Richness, Sweetness, Tannins, Max price, On sale, Vegan-friendly, Gluten-safe and Loved filters instead.

A price is blank (a dash).

No price is recorded for that product yet. Add it in the editor (three-dots menu → Edit product → Regular price) and save — price is global, so everyone will see it.

The scanner does not jump to the product.

The barcode is probably not linked yet. The **Barcode not on file** prompt shows the scanned number: pick the product and tap **Link barcode**, or add or change the number later in the Barcode section at the **bottom** of the editor — type it, or tap **Scan barcode with camera** (Sections 3 and 9). If the scanner reports that no digits were recognised, type the barcode in the scanner's typed fallback instead.

Store settings looks empty, or I cannot find Documents.

Store settings is collapsible and starts collapsed: tap its heading bar — the large chevron and the **Tap to expand** pill — to open it, and tap again to collapse it. Documents is one of the four tabs at the top of the panel — tap the **Documents** tab to see it. Sample today and Wine Knowledge are in **Support**, not Documents.

My store does not show the P8 / P9 impact.

Impact follows the store type: only Loblaws stores see the Legacy Loblaws impact. Check the type in Settings → Store settings (Section 2). Other types show a note in the Documents tab that their impact is not loaded yet.

How do I know if I am on the latest version?

Open Settings: the **version code** is at the very bottom of the Settings tab (for example Version: 2026.11.04.14) and changes on every push. If it is older, close every Grapevine tab and reopen.

My new store shows no cooler flags on any product.

That is expected: cooler status is per store and a new store starts with every cooler value blank. Set it per product from the three-dots menu or the editor (Sections 2 and 9). Store 358's values are unchanged.

I tapped Edit, Add or a heart and was asked to sign in.

That is the sign-in rule working: browsing is open to everyone, but editing, adding, changing and Loving need sign-in (Sections 1 and 11). Sign in with Google from the Account block at the top of the Settings tab — you stay signed in on that phone — then tap again.

Sign-in sends me to a dead page instead of back to the app.

The app asks to be returned to the address it is actually served from. If the return lands on a dead page, the Supabase URL settings need fixing: in Supabase → Authentication → URL Configuration, the Site URL and Redirect URLs must include the live app address — tell Michael (Section 11).

My account says "Account blocked".

An admin has banned this account. You have been signed out and cannot Love wines or make changes, but you can still browse the list. If you think it is a mistake, speak to Michael or another admin — bans can be reversed in Admin (Section 11).

Appendix Quick reference card

Task	Steps
Switch store	Store pill (top, left of gear) → pick the number
Find a wine fast	Search by brand, product, format or varietal
Pair a dish	Food pairing finder button (under the store pill) → type the dish
Play Wine Trivia	Settings gear → Games & Contests tab → Wine Trivia
Play Guess the Wine	Settings gear → Games & Contests tab → Guess the Wine
Narrow the list	Filters → Brand, Richness, Sweetness, Tannins, Max price; sale, vegan, gluten-safe, Loved toggles
Read tasting notes	Tap the product → notes under it, with its Product ID
Edit a product	Three-dots menu → Edit product → Save for all stores
Mark unavailable	Three-dots menu → Mark unavailable at this store (this store only)
Add a product	Settings gear → Settings tab → Store settings → Add product — joins your current store straight away
Set a store's products	Settings gear → Settings tab → Store settings → Set store products → tick → Save
Change the look	Settings gear → Settings tab → Appearance → Light (Default) / Dark / Auto
Learn about wine	Settings gear → Support tab → Wine Knowledge → tap a topic
Check current sales	On sale toggle; Sale / Reg / Save on sale cards; dated schedule in Section 13
Scan a bottle	Scan icon (under the gear) → point at the barcode (any orientation), or type it; a recognised scan shows only that product, fully expanded
Link, change or clear a barcode	Three-dots menu → Edit product → Barcode section (bottom) → type or scan it → Save
Sign in or out	Settings gear → Settings tab → Account block → Sign in with Google / Sign out
Set your display name	Settings gear → Settings tab → Account → Display name → Save display name
Comment on a wine	Expand the wine → comment icon in its notes → type → Send (sign-in required)
Leave a suggestion	Settings gear → Settings tab → Suggestions (under Account); Edit / Delete your own in Your suggestions
Flag a broken sale price	Three-dots menu → Edit product → Sale price not working → Yes
Love a wine	Tap the heart beside the three-dots menu — hollow = not Loved, filled red = Loved
See who changed what	Settings gear → Settings tab → Admin → Open Change history (admins only)
Open Admin (admins only)	Settings gear → Settings tab → Admin (bottom, above "Shared list connected") — users, action log, change history
Check your version	Settings gear → Settings tab → very bottom → Version code (changes on every push)
Open the documents	Settings gear → Documents tab → impact PDFs, cheat sheet, Loved wines, manual
See today's samples	Settings gear → Support tab → What's on sample today?
Contact support	Settings gear → Support tab → Support Center → tap to call or email
Change or add a store type	Settings gear → Settings tab → Store settings → pick a type, or Add new store type

Grapevine — Wine Rack Product Info Manual — November 2026 edition — matches app version 2026.11.04.14. Created and maintained by Michael Benia WR 358.
